To Whom It May Concern:

This letter is intended to evaluate breeding potential for the stallion JK Amadeus. Collection of semen was performed at a secondary facility, not associated with Littleton Large Animal Clinic. Values for concentration, volume and initial motility were performed at this facility and reported as below. Type of extender used and ratio of extender to semen is unknown. Semen evaluation of the stallion JK Amadeus is reported as follows:

Gel free volume – 110ml

Concentration – 260 million cells per ml

Initial motility – 80%

Motility at 24 hours post cooling – 75% total, 70% progressive

Motility at 48 hours post cooling – 60% total, 50% progressive

Sincerely,

Dean D. Morgan D.V.M.
